EXPERIENCE

IMS Ad Agency, Lonehill, Johannesburg

SEO & Analytics Associate

MARCH 2023 - SEPTEMBER 2023

During my time at IMS Ad Agency, I developed a strong foundation in SEO and analytics, working across a range of client accounts. I assisted with keyword research, on-page optimisation, technical audits and performance reporting, using tools such as Google Search Console, SEMrush and Looker Studio. This role strengthened my understanding of how structured SEO strategies translate into measurable organic growth.

Flume Digital Marketing, Bryanston, Johannesburg

Junior SEO Specialist

NOVEMBER 2023 - DECEMBER 2025

At Flume Digital Marketing, I managed SEO implementation across multiple industries, including finance, tertiary education, humanitarian organisations, courier services, hospitality and automotive. My responsibilities included technical audits, on-page optimisation, CMS implementation (WordPress and Webflow), structured data deployment and ongoing performance reporting through GA4 and Search Console.

I worked closely with development and content teams to ensure SEO recommendations were implemented effectively, while maintaining a focus on improving organic visibility, keyword positioning and overall site performance. I also represented the agency at the Assegais, where we were awarded two honours.

Accenture Song, Midrand, Johannesburg

SEO Specialist

JANUARY 2026 - PRESENT

Currently contributing to SEO delivery for enterprise-level clients within the telecommunications sector. Supporting technical audits, reviewing metadata implementation, and assisting with performance reporting through GA4 and Search Console.

- ☒ Google Business Profiles

AWARDS

Working within a cross-functional environment, collaborating with developers and performance teams to align SEO recommendations with broader digital objectives.

2X Assegais 2024

PROJECTS

CommuteZA

Routing Web App for South African Commuters

JANUARY 2026 - PRESENT

CommuteZA is a self-initiated project aimed at strengthening my technical SEO and systems understanding by building a platform from the ground up. The project involves implementing a headless CMS architecture to manage metadata, structured data, redirect logic and URL structuring with full control over rendering behaviour.

I am currently refining the server-side rendering approach to ensure optimal crawlability and indexation, while balancing performance and user experience. The project has allowed me to deepen my understanding of how CMS architecture, rendering strategy and structured SEO elements interact at a technical level.
